workshops”

EuroCC2 & CASTIEL2

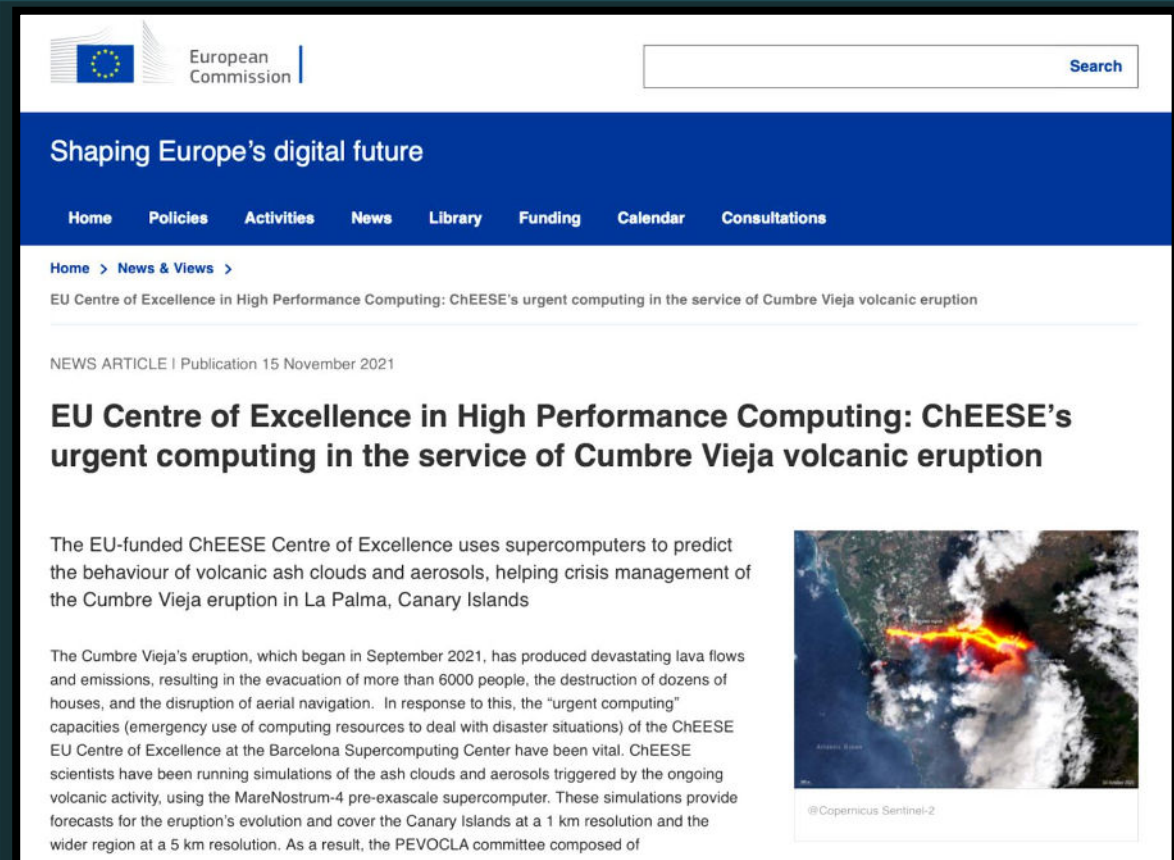

Summer 2024

With NCC Slovenia and the CoEs
CHEESE and EoCoE

" Interactions with public administration & co"

Inputs extracted from the presentations made by NCC Slovenia and the CoEs CHEESE and EoCoE

On May 27th 2024

The screenshot shows the European Commission website. At the top left is the European Commission logo. A search bar is located at the top right. Below the logo is a blue navigation bar with the text "Shaping Europe's digital future". Underneath this bar are links for "Home", "Policies", "Activities", "News", "Library", "Funding", "Calendar", and "Consultations". The main content area shows a news article titled "EU Centre of Excellence in High Performance Computing: ChESEE's urgent computing in the service of Cumbre Vieja volcanic eruption". The article is dated 15 November 2021. The text describes how the EU-funded ChESEE Centre of Excellence uses supercomputers to predict volcanic ash clouds and aerosols, helping with crisis management of the Cumbre Vieja eruption in La Palma, Canary Islands. A satellite image of the volcano is included on the right side of the article. The image shows a large plume of ash and smoke rising from the volcano, with a red and orange glow indicating the eruption. The image is credited to "@Copernicus Sentinel-2".

DO's

Ensure connections for future collaborations

Connect public administration, industry, and academia

" Interactions with public administration & co "

LINKING THE PUZZLE PIECES

OPEN SCIENCE AND FAIR DATA

SUPERCOMPUTING

COLLABORATION

DO's

Involve them from the very beginning; co-design is fundamental to cover user needs

Regulations, roles and protocols are important, particularly in emergency situations (UC service)

Clarify “who does what”, including access to computational resources

" Interactions with public administration & co"

How the ChEESE CoE approaches

Urgent computing

Solve capability/capacity problems under strict time constraints in terms of time-to-solution (emergency situations)

Exascale machines to reduce time-to-solution to operational constraints

Involves service enabling in collaboration with public bodies in charge of emergency management (volcanoes, earthquakes, tsunamis)

DO'S

" Interactions with
public administration
& co"

Define everyone's roles

- If you are going to involve institutional actors, make sure the topic matches their field. Engage the institution on topics of interest to them.
- Map your goals and define your needs. You are reaching out to them for specific things, not asking for a general advice.

Ensure you maintain the correct distance with the institution

- Follow protocol. Always follow protocol.
- Map your contact points. Find the right interlocutor, including amongst high-ranking people.
- Be patient. Institutions are slow-moving structures.

Track your communications

- Start early so you are not the one responsible for any rush.
- Use global mailing addresses whenever you can, on top of the individual addresses
- Save your mails so you can retrace the whole process

Don'ts

Take too little time for the organisational aspect

Have no clear delineation of cooperation with sponsors, partners and organisers

Pay too little attention on promoting the event in the media

" Interactions with public administration & co"

Don'ts

" Interactions with
public administration
& co"

Don't rush,
and don't be
hasty!

- Don't wait before you put your PO in the loop!
- Don't rush into calling the higher-ups
- Don't dispense of EU etiquette.

Dares - When
can I go over
someone's
head?

- Make sure you have exhausted other options
- Make sure you can justify doing it
- Be aware that they will be some blowback! Prepare for it.

CASTIEL 2

EURO²

This project has received funding from the European High-Performance Computing Joint Undertaking (JU) under grant agreement No 101102047. The JU receives support from the Digital Europe Programme and Germany, Italy, Spain, France, Belgium, Austria.
